PROFESSIONAL SUMMARY

Software Engineer with 2.8 years of experience building enterprise hospitality applications in the Hotel Channel Management domain. Skilled in Java, Spring Boot, Angular, and RESTful API development, with hands-on expertise in microservices, OTA integrations, and SQL/NoSQL databases (Oracle, PostgreSQL, Couchbase, Elasticsearch). Proven track record delivering scalable, production-ready features across hotel onboarding, reservation management, and channel configuration in Agile environments. Adept at leveraging AI-assisted tools like GitHub Copilot to boost development speed and code quality.

TECHNICAL SKILLS

Languages	Java (17/21), SQL, JavaScript (ES6+), TypeScript
Frontend	Angular 20, RxJS, Angular Material, Standalone Components, Signals, Reactive Forms, HTML5, CSS3, Bootstrap, Responsive Web Design
Backend	Spring Boot 3.x, Spring Security, Spring Data JPA, Hibernate, Spring WebFlux (WebClient), RESTful APIs, Maven
Databases	Oracle, PostgreSQL, Couchbase, Elasticsearch, MySQL
API & Integration	REST APIs, JSON, JWT Authentication, OAuth2, WebClient, Third-Party API Integration, OTA Integrations
Testing	JUnit 5, Mockito, Jasmine, Karma, Postman
Developer Tools	Git, Bitbucket, GitHub, Jenkins, Maven, IntelliJ IDEA, VS Code, Eclipse, Jira
Cloud & DevOps	Docker, Kubernetes, CI/CD, GitHub Actions (Working Knowledge)
AI-Assisted Dev	GitHub Copilot, Model Context Protocol (MCP), Prompt Engineering, AI-assisted Software Development
Software Engineering	OOP, SOLID Principles, Design Patterns, Clean Architecture, SDLC, Agile Scrum, Code Review, Performance Optimization, Debugging & Troubleshooting

PROFESSIONAL EXPERIENCE

Software Engineer **Nov 2023 – Present**

Cybage Software Pvt. Ltd.

Pune, Maharashtra

IHCM Configuration Platform (Enterprise Hospitality Distribution System) — Hotel Channel Management & OTA Integrations

Technologies: Java 17, Spring Boot, Microservices, Angular 20, REST APIs, Apache Kafka, Docker, Oracle, PostgreSQL, Couchbase, Elasticsearch, Jenkins, GitHub Copilot

- Developed and enhanced the IHCM Configuration Platform, enabling hotel chains to manage property onboarding, OTA connectivity, reservation mapping, and channel configuration.
- Designed RESTful APIs and microservices for hotel registration, OTA configuration, room/rate mapping, and reservation workflows, following a layered, service-oriented architecture with reusable adapter components.
- Worked with event-driven communication using Apache Kafka to decouple services and process configuration updates asynchronously across the platform, improving fault tolerance and scalability.
- Containerized backend services with Docker to standardize local development and streamline deployment across environments.
- Built and enhanced Angular 20 administrative modules using Standalone Components and Reactive Forms for property management, dashboards, and operational reporting.
- Integrated with internal hospitality platforms, OTA partner services, and Property Management Systems (PMS) using Oracle, PostgreSQL, Couchbase, and Elasticsearch for transactional and search workloads.

- Improved API response times and reliability through query optimization, caching strategies, and standardized exception handling across services.
- Wrote unit tests with JUnit 5 and Mockito, and debugged production issues using logs and Postman to deliver permanent fixes.
- Collaborated with frontend developers, QA, and product owners in an Agile workflow, and used GitHub Copilot to accelerate implementation and testing.

PROJECTS

StayConnect – Hotel Booking & Channel Management System

Personal Project / Mar 2025 – Jun 2025 / Java 21, Spring Boot 3.5, Spring Security, Spring Data JPA, Angular 20, PostgreSQL, Redis, JWT, Docker, GitHub Actions, OpenAPI

A full-stack hotel booking and channel management application built end-to-end to practice production-grade patterns around availability, pricing, and secure multi-role access, inspired by real-world OTA channel managers.

- Designed and developed scalable RESTful APIs using Spring Boot 3.5 following layered architecture and SOLID principles, covering hotel/room management, booking creation, inventory allocation, and dynamic pricing.
- Modeled relational entities for hotels, rooms, bookings, customers, rate plans, and availability calendars, handling overlapping-booking and rate-conflict edge cases.
- Implemented secure authentication and Role-Based Access Control (RBAC) using Spring Security and JWT, with distinct Admin, Property Manager, and Staff permission levels.
- Built responsive Angular 20 admin dashboards using Standalone Components, Signals, and Reactive Forms, with advanced search, filtering, pagination, and real-time validation for managing rooms and reservations.
- Introduced Redis caching for frequently accessed inventory and pricing lookups, noticeably cutting average response times on high-traffic endpoints.
- Documented all endpoints with OpenAPI (Swagger) and applied centralized exception handling and consistent error response formats to keep the API predictable and easy to debug.
- Containerized the application with Docker and set up a GitHub Actions pipeline for automated build, test, and deployment.
- Used GitHub Copilot to speed up boilerplate generation and unit test scaffolding, while independently designing the data model, RBAC structure, and caching strategy.

EDUCATION

R. C. Patel Institute of Technology, Shirpur

Bachelor of Technology (B.Tech) – Computer Engineering, DBATU

2023

CGPA: 8.16 / 10

CERTIFICATIONS

- Angular Development – Udemy
- Java Programming – NextTech Infosystems
- Spring Boot & Microservices – Coding Shuttle

ACHIEVEMENTS

- Delivered multiple enterprise features across hotel onboarding, OTA integrations, reservation mapping, and channel configuration modules.
- Contributed to improving application performance through query optimization, caching strategies, and API enhancements.
- Recognized for consistently delivering sprint commitments while maintaining high code quality.
- Actively adopted AI-assisted development using GitHub Copilot to improve productivity and accelerate implementation.
